

TETIS EQUIPMENT INSTALLATION GUIDE:

1. Attach or turn on the battery using a pen somewhere with good cell phone reception (open sky). Picture #1 or #1a.
2. Pay attention to the sound emitted by the equipment. It should be 1 beeps stating that it has been properly turned on and after that you will hear 3 beeps informing that the unit was able to locate itself correctly. In case of any other sounds please contact your agent immediately.
3. Contact WMC by email, phone or access our online system on the computer or cell phone app to confirm that the equipment is ready to be installed.

Installation:

1. Facing the container with open doors, install the equipment on the left side of the container with the battery side (wider side) inside the container. Push the lower button on the left side to confirm the installation (Picture #2 arrow). This will state the installation and will allow sensing doors closure.
2. After closing the doors, check with WMC or online system that the equipment is properly installed before applying the seals.
3. In case you have the Full Package, please contact WMC or the Monitoring Call Center to provide the proper information to allow simultaneous monitoring.

More Information:

1. Depending on the maintenance state of some containers, the sensor for closed doors might not be activated on some cases. In this case, please reinstall the device moving the position a little higher or lower. If this does not solve the issue, sensitive light sensors will allow the detection of any opening of the doors during the trip by monitoring any changes in light.
2. In case of problems or questions please contact your agent.
